

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0028] with the following paragraph:

B₁ [0028] With respect to installing the replacement cover 40, existing bracketing and attachment points 60 (e.g., mounting holes) are used to connect the replacement cover 40 to the power port assembly 20 to provide the connectors 42 for accessing on-board systems. Such connection members 60 are standard and well known in the art. Wires or cables from on-board systems are preferably routed from the aircraft cable raceway through an existing Seat Electronics Box 50 shroud along the seat frame into the In-Seat Power Converter 51 mounted horizontally on the plate bracket 43 attached to the forward and aft seat tubes 45, 47. If an Inflight Entertainment System (IFE) is not installed in the passenger seats 22 to which the replacement cover 40 is to be provided, the wires or cables are routed from the aircraft cable raceway along the seat structure as inconspicuously as possible to prevent passenger damage.
